

IOS International

Belgian company who develops and commercializes a reference platform in order to improve the productivity and quality of risk management :

- via IOS, a mobile, flexible and user-friendly application
- through a unique encoding of data
- retrieving and managing critical information "on the spot"
- translating this "visual information" into data in a structured and open database
- creating, editing and managing reports

IOS INTERNATIONAL develops and markets, through various partners, IOS V2 software ("Information On the Spot"): a generic and dynamic platform (developed in Java) with different intelligence layers (fire intervention and evacuation, inspection, security, environment, etc.), a dynamic, user friendly and mobile drawing table for data collection and XML input/output modules to exchange data with other systems.

IOS is a platform with different layers:

- IOS Fire module (to collect fire prevention information, in which fire intervention dossiers and evacuation plans are drawn up)
- IOS Intrusion module (to collect and control all safety information regarding intrusion, camera-safety and access control)
- IOS Inspection extension (an extension, which covers all the intelligence modules (e.g. IOS Fire, IOS Intrusion...); it can be used to inspect/control objects within a specific intelligence domain)
- New IOS modules are analysed and under construction (the platform is built in such a way that it is very easy to develop a new IOS module - according to the specifications of the client)

IOS Publisher, a program with a Web publishing function, helps you to draw up, manage and publish guidelines, procedures, reports and emergency plans – linked to the IOS platform or other applications or information sources.

But IOS is more than a software application - IOS offers a step-by-step implementation of the following solutions:

1. Geo localization of operational data
2. Global management per risk domain (fire, security, environment, hygiene, ICT, etc.)
3. 'Enterprise-Wide Risk Management': dynamic risk management
4. BCP: Business Continuity Plan – DRP Disaster/Recovery Plan
5. 'Community-Wide Emergency Response'
